

PARCEL WORKGROUP

Bureau of Reclamation,
230 Collins Rd., Boise

Oct 10, 2008
9:00 – 11:30 a.m. MST

AGENDA

Land ownership has been **critical** to the economic and philosophical development of the United States. Land parcel databases, which are also known as cadastre, describe the rights, interest and value of property. These databases represent the distribution of the real property assets of a community and its ownership, form the basis for all land use and zoning decisions, and represent the location of residences, businesses, and public lands. In other words, almost every aspect of government and business can be associated with a land parcel.

(From the preface of *National Land Parcel Data; A Vision for the Future* published by the Nation Academies Press)
